

Sun Day

by David Prina

There's a quiet revolution happening right under our noses, and almost no one in the media is talking about. The energy that powers every aspect of our lives is fundamentally changing – and our economy along with it. Renewables like solar and wind power are quietly charging onto the electrical grid all across the globe at rates that are eye-watering: in the past few years, renewables have accounted for nearly 90% of all new US electricity generation being connected to our grid. Around the world, solar power is transforming daily life for billions of people – bringing cheap, reliable energy to remote villages and skyscrapers alike. In 2024, 32% of all power in California was powered by renewable energy, with 132 days powered by 100% clean energy.

Yet you wouldn't know it looking at the headlines! The biggest story on the planet is barely getting any attention.

That's why on September 21, 2025 from 11 a.m. – 3 p.m, at Monterey's Window on the Bay Park, we will be holding the first Sun Day. It will be a celebration of solar and wind power and the progress we've made so far to make our world safer, cleaner, and energy abundant. It is also a time for us to double-down on progress and convert our lives from being dominated by fossil fuels to running on electricity. Sun Day will promote other clean technologies and help you find ways to get off fossil fuels and live a cheaper, healthier and safer life.

The program will feature kids' activities, an electric vehicle showcase, information on incentives, live events, a choral performance by the Cypressaires, and much more!
